

IdentiShare makes the process of exchanging, storing, organizing, and following up with connections simple and straightforward so you don't miss that new opportunity.

With Powerful Features For Better Networking

- 1. Digital Card Delivery:** Share your information with other Identishare and non-IdentiShare users using a QR code on the application or the IdentiShare card.
- 2. Business Card Scan:** Once you've scanned the card, create a contact record in the Identishare system using the details on the business card.
- 3. Networking Mode:** When someone scans a card via QR code or NFC, they'll be prompted to provide their own information to the IdentiShare user who owns the QR code. The provided information will automatically be converted into a new contact record.
- 4. Follow-Up Reminder:** Made new connections, but sometimes forget to follow up with them? No problem, you can set up the application to remind you to follow up with those individuals.
- 5. Contact Organizer:** Add important labels to your contact, such as, where you met them or specific details on what they do for a living. These contacts can be further filtered to find the right individual you're looking for.
- 6. Notepad:** Type up a quick note about the person you just met and save it in their contact.
- 7. Read the Room:** Feature that identifies the person you need to talk to at an event, trade show or conferences. Coming soon.
